

# STOCHASTIC METHODS AND THEIR APPLICATIONS

Papers in honour of  
CHRIS HEYDE

Edited by  
J. GANI and E. SENETA

Journal of Applied  
Probability Special  
Volume 41A (2004)

## Contents

**Branching processes:** RICHARD COWAN, A mosaic of triangular cells formed with sequential splitting rules; PETER JAGERS AND FIMA KLEBANER, Branching processes in near-critical random environments; P. RÉVÉSZ, A prediction problem of the branching random walk

**Estimation methods:** V. V. ANH, N. N. LEONENKO AND L. M. SAKHNO, Quasi-likelihood-based higher-order spectral estimation of random fields with possible long-range dependence; I. V. BASAWA AND J. ZHOU, Non-Gaussian bifurcating models and quasi-likelihood estimation; IRÈNE GIJBELS, PETER HALL AND ALOÏS KNEIP, Interval and band estimation for curves with jumps; IAIN M. JOHNSTONE AND BERNARD W. SILVERMAN, Boundary coefficients for wavelet shrinkage in function estimation; LEAH KELLY, ECKHARD PLATEN AND MICHAEL SØRENSEN, Estimation for discretely observed diffusions using transform functions; Y.-X. LIN, D. STEEL AND R. L. CHAMBERS, Restricted quasi-score estimating functions for sample survey data

**Financial mathematics:** OLE E. BARNDORFF-NIELSEN, SVEND ERIK GRAVERSEN AND NEIL SHEPHARD, Power variation and stochastic volatility: a review and some new results; VICTOR H. DE LA PEÑA, RUSTAM IBRAGIMOV AND STEVE JORDAN, Option bounds; ROGER GAY, Pricing risk when distributions are fat tailed; EUGENE SENETA, Fitting the variance-gamma model to financial data

**Heavy tail analysis:** SIDNEY RESNICK, On the foundations of multivariate heavy-tail analysis; JEF L. TEUGELS AND GIOVANNI VANROELEN, Box-Cox transformations and heavy-tailed distributions

**Properties of random variables:** N. H. BINGHAM AND H. R. NILI SANI, Summability methods and negatively associated random variables; TIMOTHY C. BROWN, Transforming a random variable to a prescribed distribution: an application to school-based assessment; HARRY KESTEN AND ROSS MALLER, Some effects of trimming on the law of the iterated logarithm; MARVIN K. NAKAYAMA, PERWEZ SHAHABUDDIN AND KARL SIGMAN, On finite exponential moments for branching processes and busy periods for queues; JORDAN STOYANOV, Stieltjes classes for moment indeterminate probability distributions

**Stochastic processes:** DARYL J. DALEY AND DAVID VERE-JONES, Scoring probability forecasts for point processes: the entropy score and information gain; J. GANI, Random-allocation and urn models; PAUL GLASSERMAN AND DAVID D. YAO, Optimal couplings are totally positive and more; J. F. C. KINGMAN, Extremal problems for regenerative phenomena; GEOFFREY PRITCHARD AND DAVID J. SCOTT, The eigenvalues of the empirical transition matrix of a Markov chain; VICTOR SOLO, Averaging analysis of a point process adaptive algorithm

**Time series analysis:** PETER J. BROCKWELL, Representations of continuous-time ARMA processes; WEN DAI, Asymptotics of the sample mean and sample covariance of long-range-dependent series; SHUANGZHE LIU, On diagnostics in conditionally heteroskedastic time-series models under elliptical distributions
